

# Benefits of guideRx™

## Evidence-Informed Guidance for Wellness Support

Personalised product matching aligned with your patient's reported symptoms, health goals, and clinical considerations—grounded in current scientific research and regulatory best practices.

## Trusted and Evidence-Informed Guidance

We support healthcare professionals in identifying cannabinoid-based products that align with patient-reported symptoms and clinical context, guided by peer-reviewed research and compliant with UK and EU regulatory frameworks.

## Real-Time Safety Insights

Identifies potential risks, contraindications, and product inconsistencies to support informed clinical decisions and patient guidance.

## Convenient and Accessible

Delivers timely, evidence-informed product suggestions integrated with real-time inventory—accessible via in-clinic tablets, digital kiosks, or mobile devices to support the clinical workflow and patient experience.

## Cannabis Consumers Need Clear, Informed Guidance

**guideRx™** equips your team with evidence-based tools to support confident, compliant, and personalised recommendations—positioning your clinic as a trusted resource.

### What is **guideRx™**?

guideRx™ is a personalised cannabinoid guidance platform that supports informed product selection based on individual health goals, patient-desired outcomes, and current clinical research—designed to align with UK and EU regulatory standards.

# How guideRx™ works?

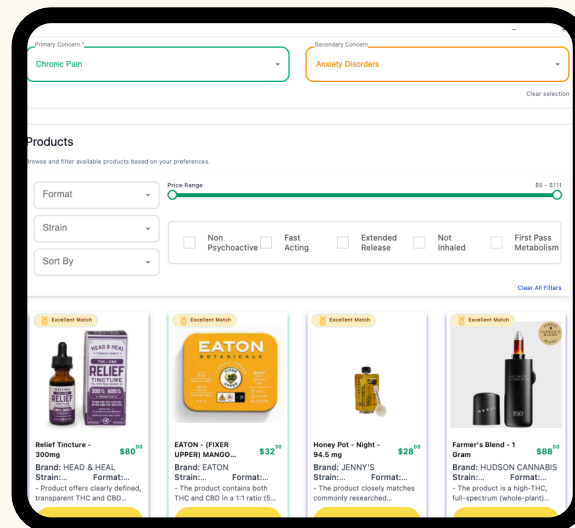

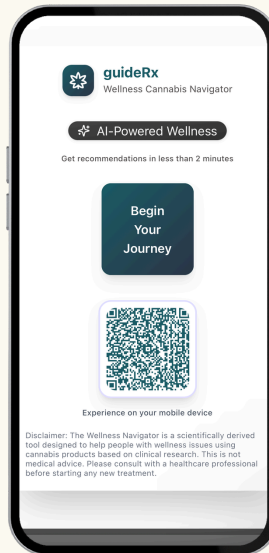

guideRx™ is accessible through secure, web-based or tablet-enabled applications within clinical or consultation settings.

Healthcare professionals can use the platform during patient appointments to explore evidence-informed cannabinoid options, assess potential risks or contraindications, and align recommendations with product availability.

No integration with patient records is required, allowing for quick deployment and use without altering clinical workflows.

## Step 1:

Select a primary health concern or both a primary and secondary concern.

## Step 2:

Provide clinical evidence for products that best support the patient's health or wellness concerns

Clinical Evidence

Manufacturer Info

Research Summary

**Chronic Pain**

- Product offers clearly defined, transparent THC and CBD content (1:2 ratio), closely matching many research formulations and supporting evidence for both analgesic efficacy and endocannabinoid system targeting.
- Strong alignment with research-backed oral/oromucosal administration routes, allowing for accurate dosing and good absorption.
- Well-supported potential for pain and discomfort relief, consistent with research showing quality of life/sleep improvements from THC:CBD combination.
- Dosing is flexible and matches or is adaptable to common research dosing ranges for both cannabinoids, supporting precision usage.
- Explicitly positions the synergistic relationship between THC and CBD, which is documented in scientific literature.

**Anxiety Disorders**

- The product features well-defined doses of both THC and CBD in a documented 1:2 ratio, aligning with many research-focused compound and dosing profiles, and providing clear per-serving and total unit measurements. There is strong consistency between the product's oral dropper route and the oral delivery routes used in relevant research, and tinctures are commonly used in such studies. The formulation plausibly supports relief and management of discomfort, in accordance with research on cannabinoid mechanisms such as neuroprotection, anti-inflammatory, and anxiolytic effects, and allows flexible dosing. The intended synergy between THC and CBD is explicitly described, supporting alignment with typical
